

forster presto xs
Pivot door

forster

Another turn for your design

Forster has added the pivot door application to its forster presto xs non-insulated profile series for interiors. Thanks to this special opening type, distinctive eye-catchers can be designed for room entry. The sky's the limit here, even with the most extravagant architectural wishes.

Thanks to its extremely narrow face widths from 23 mm and low structural depth, the elegant forster presto xs system offers outstanding freedom of design in indoor applications. The forster presto xs pivot door is available with and without frame and with single or double leaf. The slender design with narrow sightlines ensures outstanding transparency, a lot of daylight in the room and a sense of spatial well-being. Generous opening torques allow for a turning angle of up to 360° and a 90° hold-open function.

- The highlight for interior design
- Narrow face widths
- Turning function up to 360°

Fixed glazing

Transition between fixed glazing/door leaf

Technical specifications

100% steel

Slim profiles

Barrier-free

Base material

Bright steel

Face widths

From 23 mm

Dimensions

Max. leaf width: 2500 mm

Max. leaf height: 3000 mm

Inside width (WxH): max. 2500 x 3000 mm

Locks and fittings

Roller latch lock or version without lock

Door closer: corner installation or free positioning

Optional leaf hold-open at 90°

Opening angle up to 150° or 360°

Steel is our nature.

90000593/XA3.0021.ND/02-23

For us, steel is a matter of the heart. We develop long-lasting systems for attractive and energy-efficient architecture.

Forster Profile Systems develops and manufactures safe, energy-efficient solutions in steel and stainless steel for doors, windows and facades across Switzerland. Forster works with its own branches in over 20 countries – and exclusive sales partners in around 10 more. In-house consultants are on hand to assist our customers at sites ranging from Europe and the Middle East to Asia and North America. Forster systems are used for building shells

and interiors. This includes market-leading solutions that meet the strictest requirements and standards in terms of thermal insulation, plus safety applications such as fire protection, burglar resistance and bullet resistance. The product range is rounded off by matching accessories. Our customers and business partners in architecture, planning and construction can also count on comprehensive services for their respective branch.
